

■ LIVE REAL-WORLD ASSURANCE

LRWA

Test the world behind the spreadsheet.

Multi-agent commercial verification

SEED | OPENARENA | PUBLIC DEMO

Founder and financing details shared in private diligence.

The data room is the claim. It is not the proof.

A model can test internal consistency. It cannot independently establish whether operations match the narrative.

DECISION TEAMS STILL RECONCILE

- 01 Financial statements
- 02 Expert calls
- 03 Public data
- 04 One-off fieldwork
- 05 Manual reconciliation**

THE UNRESOLVED QUESTION

Do independent signals support the same claim?

One claim becomes a verification mission.

SYNTHETIC MORROW COFFEE CASE

01 PLAN + APPROVE

02 OBSERVE + CHALLENGE

03 INSPECT + ACT

CLAIM → PROBE → CHALLENGE → APPROVE → DECIDE

A repeatable decision workflow, not another report.

INITIAL ESTIMATE

¥1.92m

42.3% gap | 88% confidence

REPLAY

¥2.40m

27.9% gap | still unsupported

Declared ¥3.33m | 1,024 probes | 5 families

The moat is the governed loop, not the model.

Claim-to-observable mappings, mission outcomes, source calibration, and authorized connectors compound with every approved workflow.

- FIVE INDEPENDENT EVIDENCE LANES
- STORE OBSERVATION
 - SYNTHETIC CONSUMER
 - DIGITAL FOOTPRINT
 - LABOR
 - SUPPLY CHAIN

THE CONTROLLED TRANSITION

The Skeptic can propose an alternative explanation. Only a human can authorize the replay.

Provenance + content hashes remain attached to every evidence receipt.

Start where one contradiction can change a deal.

Investment and commercial diligence for offline and omnichannel businesses.

- 01 **1 design-partner fund**
One material operating claim
- 02 **Repeated deal missions**
Paid, scoped verification work
- 03 **Portfolio workflows**
Reusable questions and monitoring
- 04 **Vertical mission library**
Calibrated claim-to-signal mappings

THE PURCHASE IS A DECISION WORKFLOW

VC access is distribution, not the entire market.

A verification mission is a new unit of work.

LRWA does not replace financial diligence, expert networks, or data platforms. It connects a material claim to the next decision.

WHY NOW

- 01 Agents execute multi-step research
- 02 Commercial operations leave queryable signals
- 03 Buyers need provenance, permission, and replay

UNIT OF WORK

DATA-ROOM TOOLS Document

EXPERT NETWORKS Interview

DATA PLATFORMS Dataset

LRWA Verification mission

POSITIONING HYPOTHESIS

The category is commercial verification infrastructure.

One mission engine expands across decision surfaces.

Institutional verification is the wedge. Merchant and self-service questions come later.

SAME MISSION ENGINE

Commercial diligence → Supplier + channel checks → Merchant decisions

Pricing remains a hypothesis until validated in buying processes.

SHOULD I OPEN HERE?

Prove one wedge before building the platform.

The next round of evidence is commercial, not theatrical.

WORKING TODAY

- Reproducible synthetic Morrow Coffee mission
- 1,024-probe ledger across five families
- Human-approved Skeptic replay
- Prioritized evidence action queue

NEXT PROOF POINTS

- Reproducible synthetic benchmark
- 3 design partners
- 1 paid authorized pilot
- 1 licensed or customer-authorized connector

SEED ROUND

Terms and founder details shared privately

Help us prove decision-changing contradictions with a better evidence trail.
