

LIVE REAL-WORLD ASSURANCE

LRWA

Evidence before answers. No receipt, no conclusion.

Four roles. Exact receipts. Human review.

SEED | OPENARENA | PUBLIC DEMO

Founder and financing details shared in private diligence.

The data room is the claim. It is not the proof.

AI can test internal consistency. It cannot turn a supplied narrative into independent evidence.

DECISION TEAMS STILL RECONCILE

- 01 Financial statements
- 02 Expert calls
- 03 Public data
- 04 Authorized field contact
- 05 Manual reconciliation**

THE UNRESOLVED QUESTION

Which claim still lacks an inspectable receipt?

One claim becomes a verification mission.

CURRENT PROTOTYPE · CONNECTORS OFF

01 CLAIM → ROLE PLAN

02 PREPARED ≠ SENT

03 EMPTY GATE STAYS LOCKED

CLAIM → PLAN → PREPARE → CONFIRM → RECEIPT → REVIEW

A staged evidence workflow, not a generated report.

CURRENT STATE

PLAN

DRAFT QUESTIONS

No receipt yet

No claim confirmed

No metric inferred

GATE

LOCKED

UNLOCK CONDITION

User-submitted receipt

Server hash + review

before any conclusion

DISPLAYED STATE: PREPARED, NOT SENT
EVIDENCE ROOM: EMPTY / CONCLUSION LOCKED

The moat is the truth-state loop, not the model.

AI may draft questions. Only user-confirmed contact and submitted receipts can move a claim toward review.

FOUR BOUNDED ROLE ROUTES

- BUYER
- SUPPLIER
- PEER / COMPETITOR
- SKEPTIC
- MISSINGNESS AS SIGNAL

THE HONEST TRANSITION

Copying a strategy only marks it prepared. The user must confirm a real authorized contact.

A submitted receipt receives a server-side SHA-256 hash; empty evidence keeps the gate locked.

Start where one contradiction can change a deal.

Investment and commercial diligence for offline and omnichannel businesses.

- 01 **Target: design-partner fund**
One material operating claim
- 02 **Target: authorized mission**
Paid, scoped verification target
- 03 **Target: team workflow**
Reusable questions and evidence history
- 04 **Target: mission library**
Calibrated claim-to-signal mappings

THE WEDGE IS A DECISION WORKFLOW

VC access is the first distribution channel.

A verification mission is a new unit of work.

LRWA does not replace financial diligence, expert networks, or data platforms. It connects a material claim to the next decision.

WHY NOW

- 01 **AI can draft multi-stage role strategies**
- 02 **Claims can be mapped to inspectable receipts**
- 03 **Buyers need permission, provenance, and missingness**

UNIT OF WORK

DATA-ROOM TOOLS	Document
RESEARCH AGENTS	Report
DATA PLATFORMS	Dataset
LRWA	Verification mission

POSITIONING HYPOTHESIS

The category is commercial verification infrastructure.

One mission engine expands across decision surfaces.

Institutional verification is the wedge. Merchant and self-service questions come later.

SAME MISSION ENGINE

Commercial diligence → Supplier + channel checks → Merchant decisions

Pricing remains a hypothesis until validated in buying processes.

WHERE SHOULD I VERIFY NEXT?

Prove one wedge before building the platform.

The next evidence must come from authorized real work, not a staged result.

WORKING TODAY

- Running web + NestJS prototype
- Four role routes with staged states
- Manual receipt intake + SHA-256
- Empty evidence locks conclusions

NEXT PROOF POINTS

- 3 design partners
- 1 paid authorized pilot
- Durable evidence store + authentication
- 1 licensed or customer-authorized connector
